

# AUTOMATIC FIRE ALARM MONITORING

## *Protecting New Zealand*

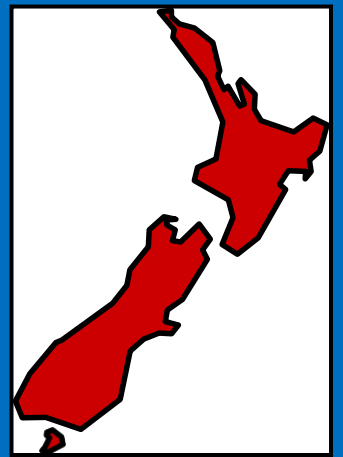

### Keeping watch 24/7

The Automatic Fire Alarm Monitoring system was designed specifically to monitor fire protection systems to Fire & Emergency New Zealand requirements. Although its main purpose is to send fire emergency signals to the Fire & Emergency NZ, the vast majority of signals are associated with the maintenance and servicing of fire protection systems. Automatic Fire Alarm Monitoring's system enables your service agent to provide the most efficient and effective level of service; one that we continue to evolve to meet changing needs.

### Nation wide coverage

We monitor nationwide — if your building is in the red area on the map, then we can monitor it for you!

### New Zealand Fire Service approved

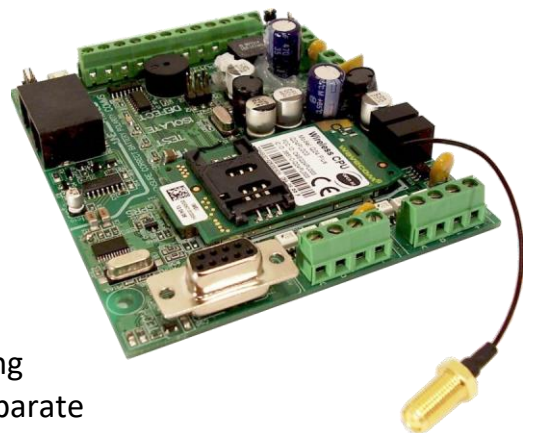

Automatic Fire Alarm Monitoring is an approved provider of direct fire alarm system connections to the Fire & Emergency NZ, providing a completely automated response that requires no human intervention to immediately raise the alarm at the nearest Fire & Emergency New Zealand Communications Centre.

### Working with you

We work with your fire alarm service maintenance provider in order to ensure that the Automatic Fire Alarm Monitoring system works seamlessly in the background.

### Dual Sim monitoring

Automatic Fire Alarm Monitoring are committed to providing a robust and reliable monitoring service. By utilising two separate cellular network providers, we provide a alternate path for your fire system in cases of a r cellular network outage.

## More For Less

<b>Additional Monitoring:-</b> Do you need to know when a door is opened, or fire pump starts? What about when a temperature sensor activates? Low pressure? The Automatic Fire Alarm Monitoring equipment includes additional inputs which can be configured to alert just about anyone to just about anything - normally for no extra cost.	<b>One Invoice:-</b> Automatic Fire Alarm Monitoring can provide our fire alarm monitoring service via your fire alarm service agent. As building owners, you paying one company for the monitoring and another for its maintenance and servicing. With Automatic Fire Alarm Monitoring you can combine the two, so your Fire Alarm Service Agent can offer a complete service with one invoice.
<b>Additional Messages:-</b> Our monitoring can directly send messages to the building owner at no extra cost to keep the owner fully informed.	<b>No Long-term Contracts:-</b> Our fee structure is transparent and straight forward, with many functions included at no extra charge and no hidden early disconnection fees.
<b>Internet-based accessibility:-</b> Owners, building managers, and fire alarm/sprinkler service companies can review activity on line to quickly provide information. Stay informed with the state of their system.	<b>Connection Cost:-</b> Our CTU units are small, and can be installed directly inside the fire panel reducing installation costs as there is no requirement for a SGD, power point or fire rated cable.
<b>New Connections:-</b> We can quickly and easily arrange new fire alarm connections to the Fire & Emergency New Zealand.	<b>Transfer Time:-</b> We can quickly arrange transfer of existing connections from any other provider at no cost to the Customer.

### How our system works

Your fire alarm installation or service company will install our Customer Terminal Unit (CTU) and fully test the connection of your building's fire alarm/sprinkler system to Fire & Emergency NZ.

The CTU will continually monitor the status of your fire alarm, and report directly to our monitoring system using the cellular network or phone line when required, giving reliable dual path monitoring.

Signals from your fire alarm system are processed and forwarded directly to the Fire & Emergency NZ on secure dual path links, while information about the site events are simultaneously provided to the associated fire alarm/sprinkler service maintenance company.

*Compact Customer Terminal Unit (CTU)  
provided and installed at customers premises*
